Tyre Pressure Monitoring Systems

- **Purpose:** Monitors real-time tyre pressure and temperature to enhance safety, fuel efficiency and tyre life.
- **Technology:** Wireless one-way RF transmitters in each tyre send pressure data to a central vehicle receiver.
- **Types:** Supports both direct TPMS (sensor inside tyre) and indirect TPMS (using ABS/ECU data).
- **Integration:** Designed to work with existing vehicle ECUs or as an independent display module.
- **Reliability:** Built to automotive-grade standards with rugged RF hardware for long-term use in harsh conditions.
- **Uniqueness:** Made in India, an indigenous alternative for OEMs and aftermarket use.

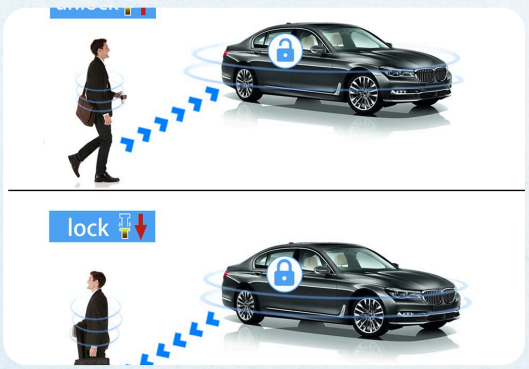

Keyless Entry System using Body Antennas

- **Functionality:** Allows remote lock/unlock and push-button start based on key proximity.
- **Technology:** Secure RF transceiver modules detect encrypted fob signals within preset range.
- **Enhanced Security:** Rolling code encryption resists cloning or signal hijacking.
- **User Experience:** Seamless passive entry for added driver convenience and luxury appeal.
- **Integration:** Compatible with existing ECUs or can be deployed as an independent kit.
- **Local Advantage:** Indigenously developed — a reliable and cost-effective solution to replace imports.
